SUMMARY

Performance engineering lead with 15+ years across banking, enterprise SaaS, and the public sector, moving into AI product management. I find where products break, slow down, or overspend, and I have worked on product roadmaps, user research, and go-to-market from the performance side. To build AI product skills, I designed and built Kwalifier, an offer-eligibility assistant that explains its answers from real data, and a daily app-review research workflow.

EXPERIENCE

Performance Test Lead Jun 2024 to Present

Bank of Montreal, Toronto, ON

- Led performance testing and strategy for a Canadian digital banking platform migrating on-premise services to AWS Lambda, improving deployment speed by 40%.
- Influenced the product roadmap from the performance side, partnering with engineering, QA, and cloud teams in an Agile framework on backlog priorities and acceptance criteria.
- Ran user research and CSAT analysis before and after the migration, reaching a "Very Satisfied" benchmark by optimizing API response times and reducing latency bottlenecks.
- Led an offshore performance engineering team across sprint planning, capacity management, and stakeholder reporting, improving team throughput by 25%.

Lead Performance Engineer Jul 2023 to Jun 2024

Bank of America, Toronto, ON

- Influenced the CashPro Mobile product roadmap for global wholesale banking from the performance side; user retention rose 7% alongside targeted performance improvements and feature prioritization.
- Contributed to mobile cheque deposits and cross-border remittance flows; user engagement rose 11%, supported by A/B testing and behavioural data analysis.
- Collaborated with design, engineering, and compliance stakeholders, contributing to user stories and ICE-scored feature prioritization.

Senior Manager, Performance Quality Assurance Mar 2021 to Feb 2023

MTX Group Inc., Bengaluru, India

- Worked with the Sales and product teams to understand customer-centric gaps across U.S. public sector agencies (healthcare, childcare grants, licensing), then managed and delivered those projects, including MVPs and prototypes.
- Contributed to revenue growth of 663%, from $157K to $1.2M in 14 months, by improving user journeys and standardizing performance portfolios across 6+ client engagements.
- Identified UX friction points through user research and stakeholder interviews, and delivered end-to-end flows through rapid prototyping and iterative testing.

Quality Assurance Lead Aug 2014 to Jul 2020

SAP Labs India, Bengaluru, India

- Managed microservices quality for SAP Concur, which had to support countries across Europe, Australia, and New Zealand; improved test coverage by 40% and reduced deployment time by 37% through Agile coaching and cross-functional collaboration.
- Contributed to product strategy for SAP Lumira, from MVP to final stage, with success metrics tied to business KPIs.
- Acted as Agile coach across 3 scrum teams, facilitating sprint ceremonies and removing blockers; velocity improved by 20% over two quarters.

Software Engineer Jun 2010 to Aug 2014

Accenture, Bengaluru, India

- Optimized e-commerce performance for Tesco through load and stress testing and bottleneck resolution, contributing to a 17% increase in Black Friday sales.
- Led performance testing for Heineken's SAP GUI and CRM systems, raising order processing by 83%, from 30K to 55K sales orders per hour.

AI AND PRODUCT PROJECTS

Kwalifier: offer-eligibility assistant Side project, live prototype

- Began as a PRD assignment and became a working prototype that tells bank customers which offers they qualify for, based on their own account data and the bank's offer catalogue.
- A deterministic rules engine decides eligibility; an LLM (Google Gemini) only explains the verdict, grounded in retrieval. Built with TanStack Start, React, and TypeScript on Vercel.

Vendor ITC Recovery Agent Built tool

- GST reconciliation tool that matches purchase registers against GSTR-2B, flags blocked Input Tax Credit, and drafts vendor emails for human approval. Built with Next.js, Supabase, and Claude.

n8n User Research Automation and RAG Simulator Built tools

- Daily n8n workflow that scrapes App Store and Play Store reviews and surfaces feedback themes; interactive simulator showing a query moving through chunking, embedding, retrieval, and generation.

Product teardowns (case-study exercises; results are projections)

- Boostcamp: auto-progression PRD and prototype for the 35% of users who quit within two weeks; targets 30-day retention from 65% to 80%.
- Spotify: event-booking friction analysis (42% abandonment) with RICE-ranked fixes; projects abandonment falling to 15%.
- Strava: funnel analysis across four user funnels; projects a $15M to $25M annual revenue opportunity.
- Groww: onboarding abandonment analysis (35% drop at KYC) with three hypotheses to test; targets 40% less abandonment.
- Google News: retention and personalization analysis with a quarterly roadmap; targets 25% user growth.
- Google Calendar: product thinking exercise ranking four improvements by impact, feasibility, and user value.
- Ladder AI: interviews with office workers, graduates, and Product Managers on AI fluency; 50 to 70% shared overlapping pain points, leading to a four-pillar product concept.

SKILLS

Performance engineering: load and stress testing, bottleneck analysis, latency and cost optimization, Dynatrace, AWS Lambda

Product: roadmap input, prioritization (ICE, RICE), user research, A/B testing, go-to-market, stakeholder management, Agile and Scrum

AI: LLMs, RAG, prompt engineering, AI product strategy, Google AI Studio, Claude Code, n8n

Tools: SQL, Figma, Jira, Miro, Google Analytics, Mixpanel

Leadership: cross-functional collaboration, offshore team management

EDUCATION AND CERTIFICATIONS

Bachelor of Engineering, Electronics and Communication Engineering 2005 to 2009

Rajiv Gandhi Prodyogiki Vishwavidyalaya (RGPV), Bhopal, India

Product Management Specialization, HelloPM Apr 2024 to Sep 2024
